Date: June 19, 2013
Subject: eDriveX v2.4 Features

Scope:

The purpose of the document is to explain features in S3 and eDriveX version 2.4. The new features include John Deere R-Series interface.

John Deere R-Series interface:

With the Outback Guidance system compatibility activation, customers can use eDriveX with John Deere steering system components such as the steering valve, wheel-angle sensor, and steering control unit found in 6R, 7R, 8R, 8RT, 9R, and 9RT Series Tractors. The combination of purchased activations from John Deere and Hemisphere GPS enables communication between the Outback Guidance system and the tractor.

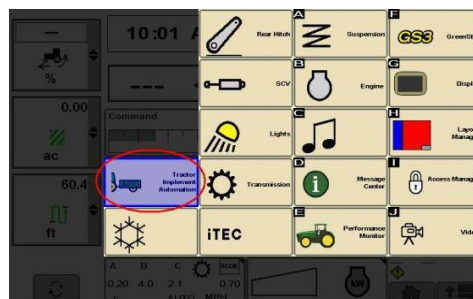

The chart below details which tractors are factory equipped with compatible steering components for use with an Outback Guidance system and require activation.

Outback Guidance activations	
Model year 2011	8R Series Tractors – 8235R, 8270R, 8310R, 8335R, and 8360R wheel models only 7R Series Tractors
Model year 2012	6R Series Tractors 7R Series Tractors 8R and 8RT Series Tractors 9R and 9RT Series Tractors*
*Factory-installed AutoTrac™ Ready is not available on scraper tractors	

The John Deere activation code can be purchased from a John Deere dealer. Please provide the dealer with the Hemisphere GPS order code 0260PC,1001. The current U.S. list price is \$250. The John Deere dealership will be able to install the compatibility activation for you. If you would like to install the activation yourself, please follow the steps below.

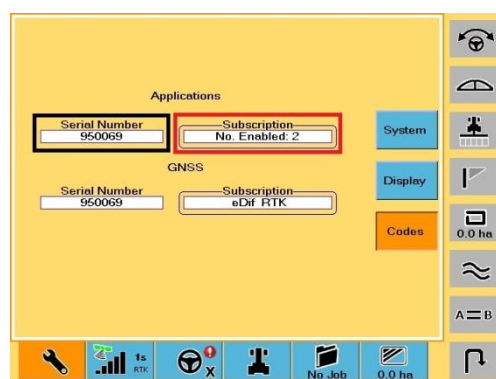

- Purchase an activation code from your local John Deere Dealer. (Dealers will use order code 0260PC,1001)
- Once the code is purchased the dealer will give you an order number (usually 6 digits)

- While in the tractor Call 888-953-3373 and select option 4 or in Australia call 0011-800-0001-3373 and follow the prompts. The representative will ask you for the order number you received from the dealer and the VIN of the tractor which will be displayed in the Tractor Implement Automation (TIA) screen on the John Deere CommandCenter™ Display in the tractor. (Select button highlighted at right.)

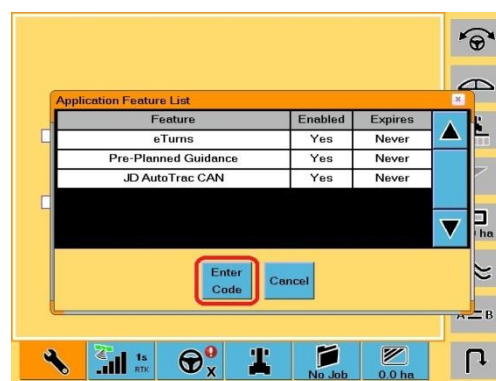

- The representative will then give you a code to enter into the TIA. This code will be 26 digits long so please be prepared to write it down and verify accuracy. Enter the activation code while you have the John Deere representative on the phone. If the activation is successful, you will get a corresponding message on the TIA screen.

- An authorization code for the S3 can be purchased from Outback customer service. The current U.S. list price is \$750. You will need to provide the serial number of your S3 (outlined in black).

- Touch the **Subscription** and then **Enter Code** icons (outlined in red).
- After entering the authorization code the JD AutoTrac CAN feature will appear in the Application Feature List.

**** Note-** In order to achieve proper communication the tractor must be running before the Outback S3 and eDriveX is powered on.
